

## The nations only mandated terror-free mutual fund

Patriot Balanced Fund invests in domestic equity and fixed income securities while also prohibiting investments in securities of companies who maintain business ties to State Sponsors of Terrorism (Iran, Syrian, North Korea, and Sudan). The portfolio is actively managed by Ascendant Advisors using a proprietary investment research process rooted in value and momentum investing principles that intends to identify the most attractive opportunities across various industries, capital structure, and market capitalizations.

*There is no guarantee that any investment will achieve its objectives, generate positive returns, or avoid losses.*

Inception Date	October 5, 2011		
Distribution Frequency	Annually		
Portfolio Manager	James H. Lee, MBA		
Fund Benchmark	60% S&P 500/ 40% ML Gov't & Corp Master		

### Description

The fund's dynamic asset allocation strategy has the flexibility to defensively position ahead of market volatility while seeking strong risk-adjusted returns. Asset allocation can range from 30-70% in equity securities.

### Investment Strategy

- Investment Objective: The Fund seeks total return from income and growth of capital.
- Equity strategy seeks undervalued securities using a proprietary quantitative approach to research based on value and momentum methodologies.
- Fixed income holdings typically consist of a risk-balanced approach blending a core fixed income portfolio with a deep value convertible fixed income strategy.

60/40 Blended Benchmark consists of 60% S&P 500 Index / 40% BofA Merrill Lynch Corporate & Government Index and is rebalanced quarterly.

**S&P 500 TR** — The S&P 500 has been widely regarded as the best gauge of the large cap U.S. equities market since the index was first published in 1957. The index includes 500 leading companies in leading industries of the U.S. economy, capturing 75% coverage of U.S. equities.

**Merrill Lynch Corp & Gov't Index** — This index measures total return on taxable U.S. corporate and government bonds, including price and interest income, based on the total mix of these bonds in the market. This index is often used as reference for the performance of a taxable corporate and government mix.

**Morningstar Moderate Allocation** - Moderate-allocation portfolios seek to provide both capital appreciation and income by investing in three major areas: stocks, bonds, and cash. These portfolios tend to hold larger positions in stocks (50-70%) than conservative-allocation portfolios.

**PROSPECTUS DISCLOSURE:**

Investors should carefully consider the investment objectives, risks, charges and expenses of the Ascendant Balanced Fund. This and other important information about the Fund is contained in the prospectus, which can be obtained at [www.ascendantfunds.com](http://www.ascendantfunds.com) or by calling 855-527-2363. The prospectus should be read carefully before investing. The Ascendant Balanced Fund is distributed by Northern Lights Distributors, LLC, a FINRA/SIPC member. Ascendant Advisors, LLC. is not affiliated with Northern Lights Distributors, LLC.

**RISK DISCLOSURE:**

**Mutual Funds involve risk including the possible loss of principal. The Fund's investments in convertible securities subject the fund to the risks associated with both fixed-income securities and common stocks. There is a risk that issuers and counterparties will not make payments on securities and other investments held by the Fund, resulting in losses to the Fund. Investments in foreign securities could subject the Fund to greater risks including currency fluctuation, economic conditions, and different governmental and accounting standards. In general, the price of a fixed income security falls when interest rates rise. Investments in underlying funds that own small and mid-capitalization companies may be more vulnerable than larger, more established organizations. A higher turnover may indicate higher transaction costs and could result in higher taxes when Fund shares are held in a taxable account.**

**Standard Deviation** measures the degree of variation of monthly returns around the mean (average) return. The higher the volatility of the investment returns, the higher the standard deviation will be.

**Beta** describes how the expected return of a stock or portfolio is correlated to the return of the financial market as a whole. A beta greater than 1.00 indicates the portfolio is more volatile than the market, and a Beta less than 1.0 indicates the portfolio is less volatile than the market.

**Sharpe Ratio** is a risk -adjusted measure of return that is used to evaluate the performance of one portfolio comparable to another by adjusting for risk.

**Sortino Ratio** is a variation of the Sharpe ratio, Sortino Ratio differentiates harmful volatility from volatility in general by using a value for downside deviation. The ratio is calculated as the excess return over the risk-free rate divided by the downside semi-variance.

**Maximum Drawdown** measures of risk that illustrates the largest peak-to-valley decline, based on simulated monthly rates of return, during a given time period.

**Correlation Coefficient** indicates both the strength and direction of the relationship between the independent and dependent variables. Values range from -1.0, a strong negative relationship, to +1.0, a strong positive relationship. When correlation equals 0 there is no relationship between variables x and y.

**Up (down) market capture** is a statistical measure of an investment manager's overall performance in up (down) markets. The up (down) market capture ratio is used to evaluate how well an investment manager performed relative to an index during periods when that index has risen (fallen).
